

# MIPAM

## 2019

## MOLECULAR INTRICACIES OF PLANT ASSOCIATED MICROORGANISMS

An Interactive Meet

February 1-3, 2019

### About the meeting

The meeting aims to gather the researchers, principal investigators, experts, provide a platform for disseminating original research results, new ideas and practical development experiences. There will be focused sessions featuring presentations and special panel discussions to bring molecular aspects of plant-microbe interactions in light.

### Objectives

- To bring together scientific experts to catalyze and advance scientific knowledge about plant-microbe interactions.
- To present and discuss most recent research findings and promote scientific collaborations.
- To assemble scientists and researchers in order to more effectively address plant diseases and overcome barriers that limit the practical approach.
- To share breakthrough innovations with visionary and practical solutions.

### Key features

- The format of the meeting is interactive.
- Plenary lectures and panel discussions
- Oral presentations by young researchers
- Extensive poster sessions

### Venue

NIPGR Auditorium
